

Reading Comprehension

Transport

Transport helps us move from one place to another. We use transport to go to school, markets, and other places. There are three types of transport : Land transport, water transport and air transport. Buses, cars, and trains are land transport. Boats and ships are water transport. Aeroplanes and helicopters are air transport. Transport makes travel easy and fast. Bicycles are good for short distances. Some vehicles need fuel to run. Public transport like buses and trains carry many people together. Walking is good for our health. We should follow traffic rules when on the road.

1. What do ships and boats sail on?

2. What energy does a bicycle need to move?

3. Why is walking good for us?
